Anton Sivkov

WHO AM I?

I'm a software engineer with strong experience in developing and maintaining complex data analysis (batch processing) systems and runtime systems (WEB APIs), managing small team. I'm able to transform requirements into architecture solutions balanced between operational costs (overall stability) and delivery time. My major language is Python, have practiced TypeScript, goLang, C++ and R.

ACHIEVEMENTS

- Developed and maintaining complex automated analytics pipeline joining medical knowledge bases and NGS data
- Migrated several services to cloud (k8s)
- Performed migration from Bitbucket and Concourse to GitLab and GitLab CI/CD for entire team codebase
- Reimplemented huge science codebase into more production-ready, clean code
- Executed several large refactorings, increasing overall maintainability and stability (and cutting maintenance cost)

EXPERIENCE

3/2018 – 1/2020
part-time

Junior Software Engineer

BostonGene Inc.

Worked on developing automated analytics pipeline of NGS data, built prototype microservices with Flask and postgres (sqlalchemy) around that.

Python / Flask / Airflow / Docker

1/2020 – 1/2022

Middle Software Engineer

BostonGene Inc.

Delivered complex features in direct communication with internal customer, migrated data analysis system from Airflow to Prefect, implemented CI/CD pipelines, created bioinformatics-related python packages. Migrated microservices from Flask to FastAPI.

Prefect / CI/CD / FastAPI / Basic bioinformatics

1/2022 – 3/2024

Senior Software Engineer

BostonGene Inc.

Migrated entire system to k8s, made critical architecture decisions, increased overall stability of system, decreased number of incidents by 40% and resources consumption by 30%. Migrated codebase from BitBucket to GitLab. Refactored codebase, increasing overall maintainability and readability. Developed front-end components with TypeScript and React

k8s / Architecture / Refactoring / Front-end

3/2024 – now

Lead Software Engineer

BostonGene Inc.

Lead a team of 4 (including myself), learned to delegate and plan work according to Agile principles, mentored Junior developer and walked they through promotion to Middle. Transformed customer requirements into solutions for further implementation by team.

Agile / Mentoring / Engineering management

EDUCATION

2015 – 2019

Bachelor's Degree

Moscow State University

Faculty of Computational Mathematics and Cybernetics

2019 – 2021

Master's Degree

Higher School of Economics (Moscow)

Faculty of Computer Science, program "Data analysis in biology and medicine" (bioinformatics)

LANGUAGES

Russian - native
English - C1

PROGRAMMING LANGUAGES

Python, TypeScript, Go, C++, R

LEARNING GOALS

AI engineering
High-load systems
Front-end
Engineering management
